# ADD MORE POWER TO YOUR MAC

## ■ ScanLink Utility

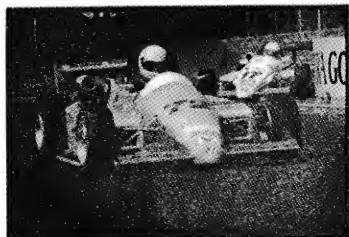

This specially designed utility program enables you to save your images using today's most popular file formats like PICT, MacPaint, TIFF, EPS and PostScript. Your scanned images can be processed by many widely used programs such as:

- MacPaint
- Microsoft Word
- Aldus PageMaker
- Cricket Draw
- Adobe Illustrator
- Digital Darkroom
- Image Studio
- Filemaker

	Mars 800 - MAC 64
Scanning Width	4.13"
Resolution	800 - 100 dpi
Gray level	64
Inverse Function	Yes
System Requirements	MAC Plus or above

### Package Includes:

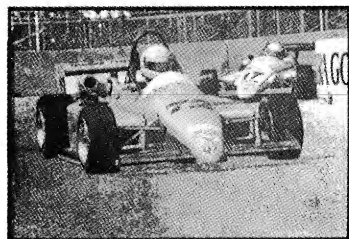

- Mars 800
- ScanLink SCSI box & ScanLink utility program
- Enhance image processing software
- Power adaptor
- User manual
- One year warranty

*The problem: a cluttered photo with no 'zip'.*

*Gamma Brightness quickly and naturally livens up the scene.*

*The NE Shadow filter changes the masked 'pavement' to 'gravel'.*

*Polygon and Fill tools are used to 'mask' the backdrop.*

## ■ Enhance™

### Power and Speed

Whether you compare speed of operation, flexibility or number of filters and tools Enhance beats the competition hands down. Check out these features:

- Ruler tool** This tool lets you scale, rotate or translate (move) an area in one window based on a second area in a different window. It's easy to change the unit of measure and calibrate the ruler directly to an image.
- Magnifying Glass** Zoom from 25% to 800%. All tools work at all magnification levels.
- Smart Lassos** Choose from normal lassos, shrink-to-fit lassos or expanding lassos that you precisely control. Lassoed regions can be added together, subtracted or intersected.
- Histograms** Both the histogram and line profile tools give information about an image important identifying and correcting image problems.
- Text** Enhance is compatible with Adobe Type Manager™ and supports options like converting text to a lasso outline and inverting or superimposing text over an image. Text can be filtered and manipulated.
- Buffers** Multiple buffers let you have different versions of the same image opened at the same time. Cut, copy and paste functions are synchronized between all buffers, ensuring exact registration.

Marstek, Mars 800-MAC 64, ScanLink are trademarks or registered trademarks of Marstek, Inc. All other brand or product names are trademarks or registered trademarks of their respective owners.

Enhance is designed for the Apple Macintosh II family of computers, or a properly equipped Macintosh SE/30. It requires a minimum of 2 Mb of RAM, System 6.0.3 or later, an 8-bit or better video card and a gray-scale or color monitor.
